

Smart Study Planner Agent

Agent Formulation • PEAS Framework • Environment Analysis

NAME	Sahil Ismail	FATHER NAME	Ismail
SEMESTER	6th Semester	SECTION	C
ROLL NO	23122137	COURSE	Artificial Intelligence (AI)

1. Agent Idea

Problem: Students often struggle to organize multiple subjects, deadlines, and revision time in a balanced way.

Solution: The Smart Study Planner takes the student's subjects, available study hours, priorities, and exam dates, then prepares a practical study schedule.

2. Graphical Representation

3. Agent Formulation

Sensor	Collects subjects, exam dates, study priorities, and the number of hours the student can study.
Environment	The student, course subjects, deadlines, exam schedule, and available study time.
Agent	Analyzes the input, gives more time to urgent or difficult subjects, and creates a balanced plan.
Actuator	Displays the final daily or weekly study timetable and recommended study order.

PEAS Evaluation

PEAS Element	Description
Performance Measure	A useful and balanced schedule, completion of planned study tasks, enough revision time, and fewer missed deadlines.
Environment	Student, subjects, exams, assignments, deadlines, and available study hours.
Actuators	Shows a study timetable, subject priority, study sequence, and revision reminders.
Sensors	Subjects, exam dates, difficulty level, available hours, and student priorities.

Environment Types

Property	Type	Justification
Observability	Partially Observable	The agent knows the information entered by the student, but it cannot fully know future distractions or exact learning progress.
Determinism	Deterministic	For the same input and planning rules, it can produce the same timetable.
Episodes	Sequential	Today's study progress can affect what should be studied next.
Change	Dynamic	Deadlines, free time, priorities, or study progress can change.
Structure	Discrete	Subjects, study sessions, days, and tasks can be represented as separate items.
Agents	Single Agent	One planning agent prepares and updates the study schedule for the student.

Example Interaction

Input	Math exam in 3 days, AI exam in 5 days, 4 study hours available today.
Output	2 hours Math, 1 hour AI, 1 hour revision / practice, with Math given first priority.
